

REMTECH EXPO HUB TECNOLOGICA CAMPANIA

26 – 28 March 2020

EnergyMed, Fiera d' Oltremare, Napoli e Giugliano

The conference "The contribution of scientific and administrative innovation towards the reform of the remediation sector" will be attended by scientists, technicians, administrators and players in the remediation sector. It will be carried out with the collaboration and patronage of the Italian Ministry of the Environment, Research Bodies, Universities, Districts, and other organizations with the aim of encouraging in support of the Environmental Regulatory innovation initiated by MATTM. The conference will consist of three scientific sessions, with invitation of key-note speakers, selected oral and posters contribution.

Scientific sessions:

I. Characterization of polluted sites

II. Technologies for the reclamation of contaminated sites

III. Environmental legislation in the field of remediation, towards the definition of the DL #risanambiente
(proposals for overcoming the problems in the current legislation)

Abstracts have to contain: Title (maximum 200 characters including spaces), name and surname of the authors and their affiliations and Email address. The abstract has to be no longer than 2500 characters (including spaces), Keywords (max 4). It has to be emailed to the address: hubcampania2020@remtechexpo.com by January 31, 2020, indicating the preference session.

The acceptance notice will be communicated by February 10, 2020.

The format of the publications is currently under finalization.

The **Hub Tecnologica Campania** project was born in March 2019, during an important event on “Land Remediation and Valorisation” theme, organized in Giugliano City, in synergy with the Italian **Ministry of Environment** and Protection of the Territory and the Sea, **Ispra**, The **Extraordinary Commissioner** for the Remediation of Abusive Landfills and with the participation of all main public and private players, both national and international. The aim of this project is promoting the value of land remediation and environmental recovery in Campania region.

The joint project is aimed to the organization of a major event focused on the theme of remediation technologies and activities, crowned by an exhibition of the best products and services, and by the opportunities of discussion between public institutions, private companies, local associations, universities, researchers and experts, every day engaged in the recovery of contaminated sites. It also provides a moment of meeting and debate with the local citizens and school students and a *site visit* directly on the “**Terra dei fuochi**” area.

The venues of the event are two. The first is **Naples** - at the **EnergyMed** fair (one of the most important events at the national level in the field of sustainable development and renewable energy sources) that will be held from **26 to 28 March 2020** at the “Mostra d'Oltremare”). The second place is **Giuliano** city, where we are expected to have an important involvement of citizens and scholars.

The Hub Tecnologica Campania is a real **hub of excellence** that sees, among others, the possibility of identifying pilot areas for the application of innovative technologies, already available on the market, and of testing new ones, currently in validation. This event will also be a good opportunity to illustrate the important successful methodological approaches, implemented at national and international level including the “**Taranto Model**” developed by the Extraordinary Commissioner for Urgent Remediation, Environmentalization and Requalification of Taranto and strategies for overcoming Community infringements developed by the Extraordinary Commissioner for the Remediation of Abusive Landfills, as well as the technological excellences for the characterization and remediation of contaminated sites, carried out nationally and internationally.

A dedicated Scientific Committee has been appointed to identify the best congressional strategies and how to promote the expected and achieved results.

On Thursday 26 March (as foreseen in the preliminary programme) will be the **Hub Tecnologica Campania National Conference: reclamation of contaminated sites, technological innovation, permanent public-private discussion**. On Friday 27 March will be the turn of the event about **The contribution of scientific and administrative innovation to the reform of the remediation sector: technologies, innovation, scientific research and applied research**. On Saturday, March 28, will be another articulated **Program of meetings and conferences with scholars, citizens of Giugliano city and a site visit on the "Terra dei Fuochi" area**.
